

Hide the minibeast!

Many minibeasts live in the layers of old leaves on the ground called leaf litter. Do some leaf rubbings to give the ants and earwig a leaf litter home.

Use a wax crayon or pencil, and find a hard surface like a book or table. Choose a leaf that has fallen to the ground and place it onto your surface, veiny side up. Place this paper on top and rub over it firmly and smoothly using the side of your wax crayon or pencil. Watch the pattern appear!
